Wheel Stops

Car Park Traffic Calming

Wheel stops are used to limit the travel of vehicles when manoeuvring into a parking space. Typical uses of wheel stops are as follows;

- i. To control kerb overhang when inconvenient or hazardous for pedestrians;
- ii. To inhibit vehicle contact with a barrier system or a high kerb; and
- iii. To inhibit vehicle encroachment into an opposing traffic space.

It is recommended that wheel stops be used to shield vertical drop to a lower level of between 150mm and 600mm

Specifications

- Wheel stop length: 1650mm.
- Wheel stop height: 100mm.
- Width (at bottom of wheel stop): 150mm.
- Wheel stop mass: 16kg.
- Manufactured to the recommendations of AS/NZS 2890.1: Parking Facilities (Part 1: Off-street Car Parking).
- Number of anchor bolts per wheel stop: 3.

Features

- Manufactured from light-weight rubber to facilitate ease of handling and rapid installation.
- Features reflective yellow markings to improve visibility.
