

Public Domain W-Beam Guardrail

Manufactured to State Road Agency Specifications

W-Beam guardrail is the world's most widely specified safety barrier system. It comprises steel posts that support a w-beam rail element.

Safe vehicle containment and re-direction is developed through a combination of the flexural resistance of the rail and the bending resistance of the posts.

Specifications

- Manufactured in accordance with state road agency specifications
- Hot dip galvanised components in accordance with AS/NZS 4680.

Features

- The high visibility of w-beam creates driver confidence.
- The post and block design reduces wheel snagging and the consequential effects of vehicle vaulting or rollover.
